Ambiguity

Ambiguity is the persistence of more than one plausible interpretation. It suspends premature closure and asks for the presence and source of non-uniqueness.

ambiguity, polymorphism, superposition, indeterminacy, non-uniqueness, undefinability, unidentifiability, uncertainty, concealment

1. Choose a keyword x on this card.
2. Choose a target y , attach this card if possible.
 y may be any card, domain, object, or topic.
3. Interpret $x(y)$: Think of aspect x of target y .
If y is attached to target z , interpret $x(y(z))$.

Aspect cards modify what aspect of a target y is investigated.

The sign at the gate is still legible. It indicates both directions.
