Aspect - Difficulty

Limits/Problems

Difficulty is the limits of what y can be or do or how it is understood. It marks failure but also differentiates the boundaries and probabilities of the possible.

difficulty, resistance, obstruction, breakdown, failure modes, absence, ambiguity, fragility, error, finiteness, breakdown

1. Choose a keyword x on this card.
2. Choose a target y , attach this card if possible.
 y may be any card, domain, object, or topic.
3. Interpret $x(y)$: Think of aspect x of target y .
If y is attached to target z , interpret $x(y(z))$.

Aspect cards modify what aspect of a target y is investigated.

Condition worsening faster than expected. Some structures resist understanding in the same way they resist repair.
