Aspect - Framing

Experience

Experience is the analysis of y through empirical contact. It anchors thought in what appears when y is met in reality: incomplete, disruptive, or representative.

experience, data, measurement, (partial) observation, trace, evidence, empirical, encounter, insight, anomaly, discovery, incompleteness

1. Choose a keyword x on this card.
2. Choose a target y , attach this card if possible.
 y may be any card, domain, object, or topic.
3. Interpret $x(y)$: Think of aspect x of target y .
If y is attached to target z , interpret $x(y(z))$.

Aspect cards modify what aspect of a target y is investigated.

*We were not looking for it. That is why we saw it.
Now the record says only: seen once, in sand.*
