Framing

Aspect - Framing

Mode of presentation

Framing is the condition under which y first appears as thinkable. Before y can be analyzed, it must have been placed into view in some particular way.

framing, viewpoint, perspective, description, context, importance, foreground, background, properties, representation, experience, observation

1. Choose a keyword x on this card.
2. Choose a target y , attach this card if possible.
 y may be any card, domain, object, or topic.
3. Interpret $x(y)$: Think of aspect x of target y .
If y is attached to target z , interpret $x(y(z))$.

Aspect cards modify what aspect of a target y is investigated.

The object was never found. Only our manual annotated by angry footnotes.
