Multiplicity

Multiplicity asks if one y exists as a unique identifiable entity or if it is many. It resists premature singularization and makes plurality and misidentification visible.

multiplicity, superposition, plurality, ensemble, population, realization, instance, replication, copies, equivalence, diversity, coexistence

1. Choose a keyword x on this card.
2. Choose a target y , attach this card if possible.
 y may be any card, domain, object, or topic.
3. Interpret $x(y)$: Think of aspect x of target y .
If y is attached to target z , interpret $x(y(z))$.

Aspect cards modify what aspect of a target y is investigated.

Duplicate record: Original rocks not distinguishable amid surviving copies.
