Aspect - Configuration

Partition

Partition is the decomposition of y into parts, classes, bases, zones, modules, or regimes. One is made up of many different ones and clarity comes from separation.

partition, zones, (de)composition, contrast, bases, modularity, groupings, clusters, classes, separation, segmentation, split, categories, regime, partition of unity

1. Choose a keyword x on this card.
2. Choose a target y , attach this card if possible.
 y may be any card, domain, object, or topic.
3. Interpret $x(y)$: Think of aspect x of target y .
If y is attached to target z , interpret $x(y(z))$.

Aspect cards modify what aspect of a target y is investigated.

Cutting instruction: Draw borders. Separate terrain along indicated fault lines.
