Aspect - Framing

Perspective

Perspective is the dependence of appearance on vantage. It reminds that no single view exhausts y , and that structure is often relative to where one stands.

perspective, viewpoints, scale, ensemble, resolution, examples, space, time, interdisciplinarity

1. Choose a keyword x on this card.
2. Choose a target y , attach this card if possible.
 y may be any card, domain, object, or topic.
3. Interpret $x(y)$: Think of aspect x of target y .
If y is attached to target z , interpret $x(y(z))$.

Aspect cards modify what aspect of a target y is investigated.

A single diagram. We rotated it once, began a second doctrine.
