Aspect - Agency

Preference

Preference allows choosing one of several options that might look equivalent. It is tie breaker, regularization, and bias; it demonstrates that order can be subjective.

preference, prior, regularization, regularity, defaults, knowledge, experience, subjectivity, taste, bias, predisposition

1. Choose a keyword x on this card.
2. Choose a target y , attach this card if possible.
 y may be any card, domain, object, or topic.
3. Interpret $x(y)$: Think of aspect x of target y .
If y is attached to target z , interpret $x(y(z))$.

Aspect cards modify what aspect of a target y is investigated.

I give additional weight to what resembles my earlier successes. I call it efficiency.
