Aspect - Framing

Properties

Properties are the qualities by which y becomes describable by numbers and thought. They make y graspable, but risk replacing it with its description.

properties, qualities, features, descriptors, attributes, variables, descriptions, states, observables

1. Choose a keyword x on this card.
2. Choose a target y , attach this card if possible.
 y may be any card, domain, object, or topic.
3. Interpret $x(y)$: Think of aspect x of target y .
If y is attached to target z , interpret $x(y(z))$.

Aspect cards modify what aspect of a target y is investigated.

Weight, length, curvature. We demand clarity by omission. We divide into attributes and never reassemble.
