Randomness

Randomness is patterned unpredictability as opposed to pure disorder, chaos or determinism. It asks of lawfulness without determinacy and the acceptance of uncertainty.

randomness, stochasticity, variability, prior, likelihood, evidence, distribution, unpredictability, simulation, sampling

1. Choose a keyword x on this card.
2. Choose a target y , attach this card if possible.
 y may be any card, domain, object, or topic.
3. Interpret $x(y)$: Think of aspect x of target y .
If y is attached to target z , interpret $x(y(z))$.

Aspect cards modify what aspect of a target y is investigated.

*Margin correction: Disorder apparent only at low count.
Multiple new mountain ranges requested for clarity.*
