Relation

Relation acknowledges that y is rarely as self contained unit and its identity is tied to internal and external relations. It shifts attention from existence to a web of connections.

relation, dependence, hierarchy, similarity, alternatives, indirectness, difference, connection, interaction, coupling, chain, flow, graph

1. Choose a keyword x on this card.
2. Choose a target y , attach this card if possible.
 y may be any card, domain, object, or topic.
3. Interpret $x(y)$: Think of aspect x of target y .
If y is attached to target z , interpret $x(y(z))$.

Aspect cards modify what aspect of a target y is investigated.

Adjacency table: Draw a line between stones on both riversides. Soon, there will be movement.
