Aspect - Passage

Translation

Translation is crossing between categories with some parts converted faithfully and others distorted. It emphasizes translation as intentful, dangerous action.

translation, transfer, transport, interpretation, modelling, mapping, encoding, model-world, world-model, implementation, representation, explainability, proxies

1. Choose a keyword x on this card.
2. Choose a target y , attach this card if possible.
 y may be any card, domain, object, or topic.
3. Interpret $x(y)$: Think of aspect x of target y .
If y is attached to target z , interpret $x(y(z))$.

Aspect cards modify what aspect of a target y is investigated.

Those symbols are faithful in structure, not in substance.
