Model components

Composition

Chameleon - Composition

Model components

The basic building blocks with which the model interacts or is framed. They provide detail to the models character without changing its nature. Everything that can be used, adjusted, rearranged, interpreted lives here.

inputs, parameters, features, latent variables, functions, hyperparameters, optimizers

Provides the concrete machinery to express, interpret, and train the model.

The model becomes a pile of parts without coherence or meaning.

Dissolve target card into its components.

"If I dissolve my model into its parts, which matter and which are accidental?"

Behind the curtain lay the apparatus for the stage composition: furniture on wheels, chalk lines on the floor, hidden ropes, scripts, and tools. Each piece seemed trivial. Yet everything the audience saw depended on it.
