Ovation to the Bland

Chameleon - Performance

Mode Collapse

Multimodal distributions are hard to fit; they are sometimes replaced entirely. As a result, the trained model might have collapsed erroneously to meaninglessly simple behavior without any value.

unimodal distributions, degeneracy, loss of diversity, miscalibration, overconfidence, entropy reduction

The model becomes a predictable, interpretable summary of complexity.

Diversity collapses; outputs converge to a single dull pattern.

Narrow the target card's effect to one dominant mode.

"Where has my model become confident in simple patterns? "

This play was not about the actors, but the directors favorite table. So they just stood there pointing at it desperately until the audience cheered savagely. How such psychology works, still no one knows.
