Model behavior

Performance

Chameleon - Performance

Model behavior

What the model actually does when it is trained or deployed. Behavior emerges from the interaction of type and components under data. It is the only thing the world beyond the modeller sees and judges.

training, learning, generalization, overfitting, hallucination, bias variance, mode collapse, performance

▲ Reveals whether the model actually works in the world.

▼ Model behavior becomes an illusory performance that dazzles and confuses.

▶ Ask of target card how it behaves in practice.

"What does my model do when confronted with reality?"

Flawless. Flawless. Flawless. Failure, Collapse, Confusion, Desperation, headless panic, and last minute adjustments. Thats how it always is when they go out on stage to meet the audience.
