Phase transition

A qualitative change in behavior. The same system now operates under different rules. A boundary is crossed, after which previous descriptions no longer apply.

phase transition, qualitative change, switches, decisions, regimes, thresholds, modes

Structural changes and phase transitions are part of life.

Converts continuous change to discrete decisions.

Imagine a situation, in which target card would behave qualitatively different.

"Under which conditions would the phenomenon behave qualitatively different?"

It alters the rules. What worked stops working. Not gradually. Explanations arrive too late.
