Designed Elements

Machine represents artifacts of intentional design operating in the world. Roads, pipes, sensors, networks, and automated systems act according to logic fixed at their creation.

engineered systems, infrastructure, automation, technical artifacts, imposed regularity, designed logic, software

Identifies purposefully designed aspects.

Assumes intentional rules where there are none.

Ask which aspects of target card follow rules – and who made them.

"Which part of my phenomenon is following engineered rules?"

A facility stands within the mountain. Conveyors move. Tools engage and release. They were once made to do so. Now the process continues whether or not it is seen.
