Natural Elements

Nature is the basis that is present before anything is named or altered. Rock, soil, water, vegetation, climate, gravity. It is substrate and inventory for all phenomena which occur, indifferent to explanation.

physics, natural sciences, material behavior and properties, biotic and abiotic world, environment

Grounds in material reality and constraint.

Neglects influences not immediately perceptible.

Reduce target card to only what you can perceive.

"Which part of physical reality is present and active for this phenomenon?"

The island is there at dawn, and always. The ground slopes gently towards the sea. Stones vary in size and color. Grass grows unevenly. Wind moves through low branches.
