The anomaly

Source - Trace

Outlier

A singular anomaly that overwhelms all other traces. A massive scar, an isolated collapse, a lone disruption. It stands apart from surrounding evidence and distorts interpretation or is uneasily ignored.

different distribution/generative process, rare shocks, singular evidence, leverage points, tail behavior

- ▲ Recognize limit cases and catastrophic possibilities.
- ▼ Skews understanding by overweighting rare occurrences.
- ▶ Treat the target card as an exception.

"If something looks out of place, should I ignore, explain, or accept it?"

Site behaves mostly as expected. Exception: Singular deep fracture. Anomaly overrides previous classification schemes. Does not repeat. Remainder of the site appears unchanged.
