The noise

Source - Trace

Noise

Traces that look like decorrelated noise and don't follow any apparent coherent pattern. Attributed to fluctuations of the phenomenon or the observation device, sometimes the carrier of important information.

irrelevancy, unpredictability, decorrelation, disorder, corruption, uniform/gaussian distribution

Avoid being dragged to microscopic details; separate noise from signal.

Discard as irrelevant important information.

Interpret target card as less coherent and more random than it truly is.

"Where could that noise come from and might it be important?"

Mineral composition varying wildly. From one Milimeter to the next: complete decoherence. Degree and severity of decoherence correlated with weathering pattern. Unclear diagnostic value.
