

The nonlinear

Chaotic data

# The nonlinear

Source - Trace

Chaotic data

Observations that resist simple explanation. Patterns overlap, diverge, and change direction abruptly. Order exists, but is hidden. Small differences appear to produce large variation.

chaos, nonlinear dynamics, irregular data, sensitivity, unpredictability, irreconstructability

Understand phenomenon as deterministic but sensitive.

Discourage inquiry by appearing unintelligible.

Interpret the target card as highly sensitive to small changes.

*"Where does a small variation seem to produce disproportionate effects?"*

*Site appears disordered. Disorder consistent across surveys. Genesis simulations incompatible. Site resists summary.*
