

The Source

The phenomenon itself

The Source

Source -

The phenomenon itself

The world as encountered as things that exist rather than objects to be modeled. Source is the domain of literature, field observation, and prior knowledge — post-naïve but pre-formal.

real-world grounding, pre-formal modeling, domain understanding, literature review, observation, facts

Grounds in reality; prevents premature formalization.

Can overwhelm with detail or delay commitment.

Consider target card a real phenomenon, just as important as your original one.

"What do I need to understand about the phenomenon before it can be modeled?"

Researcher arrived. Notebook empty. Landscape chaotic. Compression postponed. Recorded as is.
