Ensemble

The phenomenon across many instances under a macroscopic view. Individual events blur. Statistical properties and patterns emerge that are invisible to the isolated instance.

ensemble distribution, generative process, statistical properties, totality, aggregate behavior, global patterns

Outlines the distribution of possible behavior.

Insight lost to vastness of possibility.

Take a macroscopic survey view of target card.

"What patterns persist even from far away or across many realizations?"

$N \rightarrow \infty$ $\langle H_2O \rangle$

Countless reactions occur, invisible alone. Together, they form a state. A compression of totality. The system becomes describable.
