Framing

Asks from which perspective the phenomenon is seen. The same thing may appear as objects, relations, a singular instance, many instances, or through a different observational discipline altogether.

scale, resolution, units, relations, instance, ensemble, perspective, modality, reframing, plural description

Multiple descriptions prevent perspective from posing as phenomenon..

Fragments understanding into incompatible descriptions.

Look at the target card from another descriptive discipline.

"How does this change when I change the way I look at it?"

Up close, only parts. Then only lines. Then one event. Then too many to count. Then something different altogether.
