## Structure - Ordered Knowledge

### Probability Distribution

Distributions construct a geometric representation of belief and a ruleset on how to update based on evidence. Every piece of knowledge takes shape in the distributions properties.

parametric families, bayes, independence, univariate, multivariate, modality, moments, tails and outliers

Clarifies how outcomes may vary, giving shape to uncertainty.

The distribution is unseen. Complexity and Randomness are confused.

For target card, replace one known aspect with a distribution. Describe the impact.

*"Where does the Randomness come from – a lack of knowledge or a generative process?"*

*In the treasury hall stood plates of gold poured into the shape of questions. Many novices tried to fit them together but found only their shadows combined nicely.*
