Structure - Instruments of Constraint

Constraints

Constraints are the model's enforced boundaries. They forbid, pull, discretize, preserve, and select based on preference or prior knowledge. Constraints stabilize by shrinking probability but risk locking out truth.

feasibility, hard/soft (in)equality constraints, discrete logic, regularization, invariance, symmetry, conservation

Stabilizes learning, knowledge, principles, and prevents meaningless freedom.

Shrinks possibility into prejudice and locks out the truth.

For the target card, impose one rule it may not violate.

"What have I made impossible, and what evidence would make me regret it?"

In the workshop, they nervously laid out divider, spring, lever, scale, and razor. Each tool could make the machine more precise. Each tool removed a world.
