Void - Void Dynamics

Model Exclusion

Explicit exclusion does not appear anywhere in the model M but reshapes the void $V = E + U$ instead. These explicit or implicit decisions are typically not registered even though they shape future model expansion.

set of exclusion/decision/implication, model vs nonmodel, model space calcification, indirect commitment

Exclusion as a visible, meaningful action that impacts our understanding of the model.

Explicit and implied exclusion mix with nondecision and go untracked.

For target card, clarify what it excludes and what it leaves undecided.

"Which exclusions shape your model space more than your inclusions?"

Glorious "never"! Invisible wall! We eat the black rectangles into the fabric. We don't need a star for this! This is an adventure! No detours!
