Inputs the model cannot receive, did not receive, or was never built to accept. Includes dimensionality, type, shape, structure, distribution of inputs: ungathered information, unobserved datapoints.

input space shape, data modality/type/shape/structure/distribution, ungathered/unobserved data, data manifold

Input type specified by modeller, data delivered by reality.

Confuse omission with irrelevance.

Are there inputs to target card, that were omitted or never seen?

"What information/events never reached my pipeline?"

I thought for a second this might be the way out. But it was where I fell down into this prison so long ago. I could not even recognize the stars anymore.
