

Explainability Void

Interpretability Gap

Explainability Void

Void - Interior Void

Interpretability Gap

Not properly understood regions of the model. Some model components seem unexplainable, either due to complexity, lack of context, or them being nonsensical. This intransparency should be mapped.

black-box region, opaque behavior, randomness, complexity, adaptivity, structure, epistemic uncertainty

Inexplainability as admission to reality where it does no harm.

Mistaking operability for comprehension.

For target card, name one aspect you do not understand.

"Where does my understanding end while the model continues?"

I asked what is happening to me. No answer. Just another transformation and another corridor.
