

Expression Void

Limit of representation

Expression Void

Void - Interior Void

Limit of representation

Real world concepts that have no representational analogue inside the model. Information flows through predefined structures don't mirror real phenomena, which subsequently go unrepresented.

inadequate representation, incomplete world-model map, missing analogues, inexpressible properties/features

Keeps model clean and awareness of represented properties clear.

Forces inadequate translation of model and world.

Ask, which important real world property is missing from target card.

"What real-world property cannot be found inside my model?"

I made a decision. I went forward, boldly, through the labyrinth. It took the color from my life, made me empty and flat. Now I just shamle onwards meaninglessly..
