

Here first forms

Implicit prior over T

Here first forms

Void - Void Geometry

Implicit prior over T

The Void is not uniform; some regions naturally invite form. This unarticulated regularity is a prior over model space with unclear source. Here the first decisions are made and the model M gets its first element.

default assumptions, natural explanations, modelling paradigms, habit, best practice, graph root, extendability

The silent prior shapes where you start from – solid, interpretable, extendable.

Confusing the easiest form with the correct one.

What must come before target card to make it more probable?

"Are there „first forms“ I always reach for? Consider alternatives."

I see you looking at it. You are right. This isn't bias. This is the will of the world. This is destiny. Follow it.
