Boundary of model space

Here it all ends

Void - Void Geometry

Boundary of model space

The absolute boundary of modellability, i.e. regions where no reasonable model can be formed. This may be due to limitations of theory, of the world, or of the resources you command.

modelability limit, impossible models, computational intractability, unknown theories, resource constraints

Avoids futile endeavors and concentrates efforts.

Mistakes hard for impossible; gives up on improvement.

Ask for target card: Can this be modelled at all?
Is it worth it?

"What could push my model over the boundary into impossibility?"

This is where we fray. If it is not us, call it irrelevant. We will reward you for your discipline.
