

Here it remains

Stable part of T

Here it remains

Void - Void Geometry

Stable part of T

Stable region of model space T where distinctions exist and persist. Components have been assigned to model M, Eclusion E or Indecision U and for some reason this partition remains unchanged.

stable region, model core, proven architectures, default models, invariant partition, common ground

A model/complement partition so stable it is unperturbed by new observations.

Mistakes stability for unique truth.

Ask what would be needed to change core aspects of target card.

"What part of model space might remain stable for the future and when would I give it up?"

You look weary. Sit down here in those folds. They will keep your weight forever.
