

Here no distinction

Pre-Distinction State

Here no distinction

Void - Void Geometry

Pre-Distinction State

The ultimate start is a uniform distribution over model universe T . Everything is undecided, M is empty and the Void $V = C(M) = T$ contains all. Structure must come from somewhere else.

indistinguishability, uniform possibility, no categories, no scale, no direction, no variables, no criticism

Reflects a true unbiased state: all modelling is still possible.

Paralysis by undifferentiation as nothing distinguishes itself.

Erase one distinction that arose from target card.

"Can I formulate the modelling question without any allusion to model structure?"

Come closer. We are going on an adventure. No priors. No criticism. No guilt. Just ... possibility.
