Component Deletion

Light falls

Void - Void Dynamics

Component Deletion

Removing a component might feel like a step back but also restores possibility and alternatives. Deletion is part of the modelling cycle also for exploratory purposes like ablation studies, comparisons.

correlated disappearance, model correction, modelling cycle, diagnosis, performance, ablation studies

Deletion of model components for the sake of quality or experimentation.

Deletion as an uncontrolled destructive act to be avoided.

For target card, ask which other cards would be impacted by its removal.

"What would be interesting to let go of?"

We sing as it dims. This is also experience! Even endings count! We press our faces to the amputation! Our friend comes back! Delicious Mercy!
