Absence of data

No Trace

Void - Exterior Void

Absence of data

A disconnect between model and world, e.g. via absence of data. Significant aspects of the model receive no imprint from reality; or significant aspects of reality do not make it into the model.

missing/incomplete data, unobserved/unexplained variables, coverage/sparsity, lack of exterior feedback

What enters the model via data is meaningfully curated.

Crucial aspects of the world remain hidden from the model.

Delete from target card every trace of experience or empirism.

"Which signals never entered my model?"

Found these imprints. Disintegrating and impossible to make sense of. They fit nothing I am looking for here.
