

No Truth

Misassumed reality

No Truth

Void - Exterior Void

Misassumed reality

Absent of underlying physical reality, the model components do not match to any real-world entity or process. Mapping model behavior back to real-world behavior to inform decisions becomes problematic.

abstraction, absent source element/process, model – world mapping, generative assumptions, ground truth

Flexibility and pragmatism in abstraction.

Model mistaken for / silent on reality.

Untether target card from from anything real.

"Do my model components represent something existing?"

This thing seemed to grow, to live. No longer. It is just germinating more hulls of itself.
