Model Initialization

Star forms

Void - Void Dynamics

Model Initialization

The first modeling decision ruptures uniform absence in T and injects instead a specific model component into M. Together with it come exclusions E and a nonuniform probability of what follows.

first component/decision, first exclusions, future impact, decision reconstruction, historical analysis

An informed and decisive beginning that rules out less productive ones.

Future structure imposed without recognizing cost or consequences.

Treat target card as an event that annihilated alternatives to it. What were these?

"What was your first modeling decision and what possibilities did it displace?"

We found the first star! We bite it open! Fresh metal. We cheer. First taste! First split! First First! We chew on the edge together!
