External Influence

# Force and motion

Volition - Universal Will

External Influence

Constrained movement in a field of forces not of our own design. We act inside a landscape already half-built: institutions, incentives, audiences, and technical contingencies insist on their preferred directions.

incentive/pressure landscape, institutional constraints, publication bias, deployment context, data revelation

Provides environment and context for the development process.

Model development dominated by implicit pressures rather than the model's goal.

Ask how other people would want you to interpret target card.

*"Which forces would still act if I refused to move and who benefits from that?"*

*No motivation is required. The field already moves you.*
