

The inversion

Importance shift

The inversion

Volition - Universal Will

Importance shift

Importance is reassigned by the world. What you treated as marginal becomes decisive; what you optimized becomes an irrelevant answer to a wrong question. This exposure to the world is to be greeted with open arms.

importance inversion, problem mis-specification, neglected variables, unknown unknowns

- ▲ Reveals blind complements and neglected dimensions.
- ▼ Locks the model into optimizing irrelevance.
- ▶ For target card, take one aspect you assumed as background and make it central.

"What did I decide not to ask, answer, or model?"

Importance redistributes without permission.
